Web Developer

About the position

We are looking for a highly motivated and energetic Software Engineer to join our amazing R&D team and help us build our cloud-based platform for issuing mortgages.

Responsibilities

- Developing front end (Salesforce Lightning Web Component based on JavaScript Web Component) website applications.
- Developing back end (Salesforce Apex based on java) website applications.
- Designing user interactions on web pages.
- Creating servers and data models for functionality.
- Ensuring responsiveness of applications.
- Meeting both technical and business needs.
- Creating business processes using cloud platforms such as Salesforce.

Requirements

- Bachelor's degree in Software Engineering, Information Systems Engineering, Computer Science, or equivalent.
- Strong understanding of object-oriented programming and solid design principles.
- Passionate for learning new technologies and enhancing existing skills.
- Excellent English communication skills, both written and verbal.
- Team player, independent, able to work in an unstructured and fast-paced environment.

Extra Points for

- Experience in Salesforce.
- Develop and consume RESTful APIs.
- Experience with JS Frameworks such as React.
- Experience with Agile methodologies.
Experience with Git and GitHub.
